OptiMobile and Borderlight Announce Sales Partnership of WBX™ Enabled Services

Kista and Uppsala, Sweden OptiMobile AB and Borderlight AB today announce that they have entered into a partnership under which Borderlight AB will provide users integrated services enabled by OptiMobile AB's patent pending WBX™ technology. Users will enjoy mobile voice calls using WiFi (VoIP over WLAN); when WLAN-access is not available the ongoing voice call is automatically transferred to cellular (GSM) networks without interrupting the call. Users experience cost reductions when they reside within WLAN-coverage as mobile calls are seamlessly handed over to the Internet (VoIP) or routed to the fixed network (PSTN). Also, users experience productivity increases as they only need to handle one telephone in and out of office.

Borderlight AB works with business development and operations of Metro Networks with a powerful service platform for full Triple Play services (Internet, IP Telephony, IP-TV and Video on Demand). Customers are municipal organizations, Metro Network owners and landlords. Borderlight AB's customers enjoy very high coverage throughout its Swedish offices through Borderlight AB's existing Metro Ethernet connections. Hence, a user is able to place calls between local offices within Sweden using VoIP only, which further emphasizes the customer benefits of the WBX™ enabled services provided by Borderlight AB.

"Our customers have a strong need for more and better mobile voice services with normal business quality at affordable costs. Seamless roaming between WLAN and GSM gives our customers completely new tools to develop and integrate their use of mobile IP Voice in their office with good GSM coverage outside the office. We also believe that this technology will encourage and speed up use of other valuable mobile services like mobile e-mail, daily reporting, calendar and scheduling functions, high quality mobile TV and video applications etcetera, since hardware platform is already fully or partly paid for by savings in mobile phone charges. Therefore, WBX™ enabled services are of great interest to our customers" says Sten Oscarsson, CEO of Borderlight AB.

"Borderlight AB has an impressive track-record and has the necessary experience and infrastructure to provide users a high-quality service. This ensures satisfaction

among customers subscribing to WBX™ enabled services via Borderlight AB” says Lars Edman, CEO of OptiMobile AB.

About OptiMobile

OptiMobile AB is a privately held company in the field of seamless voice telephony over different wireless networks. The company has developed the patent pending product WBX™ in the converged networks field of cellular phones and wireless VoIP (Voice over the Internet Protocol) that provides end users with a transparent service utilizing several networks such as GSM and WLAN.
